

COMP 4350 Project Iteration 1

Group A (RPG Companion App)

Implementation: (11/11)

- Fully working features for the user stories planned for iteration 1. (6/6)

Comment: Managed to setup and bring up your application but none of your features were working correctly, for instance save campaign, the module is there but the save is not working (i.e. nothing happens when click on save). Referring to the code base, I could see your character and campaign implementation as per your stories. If you have multiple branch, please specify which branch to be used for evaluation.

- Back-end unit tests (dependencies to UI, DB, or other classes should be stubbed/mockied out) (3/3)

Comment: You have provided limited amount of test but you have to focus more on your testing in upcoming iterations.

- At least one integration test per detailed story (2/2)

Comment: You have provided one! Integration test which is located under your unit test file! /tests/jasmine/server/unit/CharacterTest.js please make a proper adjustment to the content of your test files!

Design: (9/9)

- Good programming practices (2/2)

Comment: Proper packing of your project as well as good separation of your tests plus segregation of your client.

- Proper design patterns (3/3)

Comment: The fact that you are using meteor, you are adapting template method pattern, you might as have a look at this book called "Meteor Design Patterns".

- Architecture sketch showing high-level components/services and the important relationships between them plus some important classes within components. (4/4)

You have provided enough insight into your architecture by providing the flow of your application, your database structure and the relations plus the detailed architectural diagram that described your client and server applications.

Planning:**(5/5)**

- Team's communication and members' contributions **(3/3)**

Comment: Team communication channel is "Slack" plus minutes of meetings are provided, just that please make sure to specify participants in your meetings. All members are required to participate in implementation some member only committed as low as 5 lines! Also there is no explicit document describing each member's contribution.

- Following the plan **(2/2)**

The only document you have provided about your plan is Trello, under iteration 2 you have only 4 stories which total cost is 4 days which is low for your second iteration, your iteration 1 stories if they are done you must mark them as done and if not you must carry forward them into your next iterations! Plus, it would be good to have simple text plan document specifying what you have done in previous iteration and what you are going to do in upcoming iteration (user stories).

Total**(25/25)**
